DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/8/2007 has been entered.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein

Art Unit: 2874

were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 7, 8, 9 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pan (US 5706371).

Pertaining to claims 7, 8, 9, and 17, Pan discloses an optical isolator array device wherein an optical component 13 between two optical fibers 25 furnished at their end with lenses 21 (column 2 lines 45-55, hereafter indicated as 2:45-55, 2:66-67, 3: 46-52, Figs 1 and 3). A support 10, on which is fixed an array of capillary tubes 12 by the use of epoxy, has a blind cut 14 (a cut which does not penetrate the entire depth of the support) so as to separate the capillary tubes 12 such that they are aligned with one another, wherein the cut 14 is perpendicular to the longitudinal axis of the fibers 25 (within grooves 11) and the optical component 13 is fixed with epoxy therein so as to be flush against one face of the cut 14 so that it is also perpendicular to the fiber 25 axis (2:64-67, 3:1, Fig 1). It is also noteworthy that Pan discloses the cut 14 may be nonperpendicular to the longitudinal axis of the fibers 25, due to the desire to closely fit the cut dimensions with the dimensions of optical component 13 (3:19-27). Therefore, one of ordinary skill in the art would have found it obvious to fashion the cut so that the cut is perpendicular to the longitudinal axis of the fibers, as Pan has disclosed this option as one of two manners in which to fashion the cut. In addition, it is well known in the art to

Art Unit: 2874

fashion a cut that is perpendicular to the longitudinal axis of an optical fiber. Another instance where such a cut is disclosed in prior art would be Cullen et al (US 5325456), and is mentioned herein only as an example of a perpendicular cut. Furthermore, as Pan discloses both perpendicular and non-perpendicular cuts (with reference to the optical fiber longitudinal axis), it would have been obvious to one of ordinary skill in the art to form a cut of any geometry, so that it closely fits the optical component disposed therebetween the fibers, including making the first cut perpendicular to the longitudinal fiber axis and the second cut at an acute angle with the first cut, as this orientation would fit, for example, a right-triangular shaped optical component.

Allowable Subject Matter

Claims 1-6, 10-16, and 18 are allowed.

The following is an examiner's statement of reasons for allowance: While the prior art discloses structures, such as Pan discussed above, which have similar structural features to the present invention, this applicable art does not disclose, nor does it reasonably suggest a *method* for creating such a device wherein the support is *drilled* so as to fix a *capillary tube* therein, the tube is fixed in the drilling of the support, a *blind* cut is made in the support in such a manner as to separate the capillary tubes, and wherein the first plane face of the cut is *perpendicular* to the longitudinal axis of the capillary tube. Further, an optical component is then positioned *on the first plane face* of the cut, and an optical fiber is positioned in each of the capillary tubes.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 2874

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

Applicant's arguments filed 12/8/2006 have been fully considered but they are not persuasive.

Applicant asserts, with reference to claim 7, the capillary tubes 12 of Pan are not aligned, citing Figures 5a and 5b as examples, and therefore asserts Pan does not disclose the subject matter of the claimed invention as described in claim 7. The Examiner disagrees.

The capillary tubes of Pan are optically aligned, thereby allowing a light signal to propagate from one tube to the other through the intermediate element. This is precisely illustrated by Figures 5a and 5b. The limitation of claim 7 which states, "separate the capillary tube into two parts which are aligned with each other" does not require the two parts to be physically aligned with one another, such that a common straight line may be drawn which runs along the length of each tube. The above limitation simply requires the two parts to be aligned in some manner. In the case of Pan, the two parts are optically aligned, which is clearly shown in Figures 5a and 5b of Pan.

Conclusion

All claims are drawn to the same invention claimed in the application prior to the entry of the submission under 37 CFR 1.114 and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the

Art Unit: 2874

application prior to entry under 37 CFR 1.114. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action after the filing of a request for continued examination and the submission under 37 CFR 1.114. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rhonda S. Peace whose telephone number is (571) 272-8580. The examiner can normally be reached on M-F (8-5).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rodney Bovernick can be reached on (571) 272- 2344. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
